> Why do I not see tabs in the MATLAB Editor in R2016a? In my older versions of MATLAB, I can see the name of my M-file as a tab in the editor. How come it does not appear that way in R2016a?

✔ Accepted Answer

> This is not version specific. This happens because by default MATLAB will use the single file editor when editing an M-file. The way to switch the default to the multi-file editor is to open up more than one M-file in MATLAB Editor windows and then press ctrl+shift+D in each of the editor windows (or in one of them navigate to the top right drop-down menu and select the "Dock All in Editor" option). This will doc the M-files into a single multi-file editor which can then be used either docked or undocked.
